

STREAMLINE YOUR DEVELOPMENT ENVIRONMENT

Enjoy a comprehensive project view of your application at every stage of the development life cycle. Navigate procedures, database schema, graphics, data files, and documentation. View change history, version lineage, impact analysis, and tasks. See descriptions, current states, attributes, version notes, and change information for each application resource.

IMPROVE PRODUCT QUALITY

Automate change promotion throughout the development life cycle. Use impact analysis tools to see what has changed, who changed it, why it has changed, and what is impacted by the change. With automated movement of baselines, know that what gets changed gets tested and what gets tested is what end-users receive.

AUTOMATE DEPLOYMENT

Manage the application release level for each end-user site, enabling the creation of optimized deployment packages with everything needed to deploy software changes, update schema, and compile your application updates at end-user sites with no additional license fees.

Roundtable® TSMS

Software Configuration Management for OpenEdge® Development

Control the costs of developing and maintaining your software application.

Roundtable TSMS:

- ☑ Manages the complete software lifecycle from development through deployment.
- ☑ Provides an easy-to-navigate view of your software project at every stage.
- ☑ Increases developer productivity through tight integration with the OpenEdge development environment.
- ☑ Satisfies strict compliance requirements.

"Roundtable has given our team a competitive edge. Extending our development resources with Roundtable has meant we can support customers more effectively, efficiently, and deliver updates with greater frequency." — **Director of Technology for Hagen OA, Electronics for Imaging**

"Compared to previous systems, we're seeing a good 50-60% savings in time and a 30-40% increase in productivity. I can attribute a lot of this to where Roundtable has helped us the most: standardization." — **Senior Programmer/Analyst, Washington School Information Processing Cooperative**

"It [our previous process] was really manual, very tedious, and prone to a lot of mistakes. With Roundtable, life is much different. We couldn't imagine going back. It makes us wonder how we got by for as long as we did without it." — **Manager of Software Development, CMS Transport Systems**

REPUTATION

For more than a decade, Roundtable TSMS has played a critical role in providing Software Configuration Management solutions to hundreds of development teams worldwide.

RELIABILITY

Roundtable TSMS is built on technology you trust — Progress OpenEdge — delivering proven performance, security, and scalability for your valued software applications.

PARTNERSHIPS

Tugboat Software is a technology alliance partner with Progress Software Corporation — a global supplier of software and services that simplify the development, deployment, and management of business applications.

PROGRESS
software

Benefits

Empowering both developers and project managers, Roundtable TSMS accelerates productivity and decreases time to market while improving software quality.

- Improves management overview
- Maintains management control throughout the entire software development lifecycle
- Enforces auditing procedures
- Safeguards systems assets
- Accelerates productivity
- Improves team collaboration
- Decreases time-to-market
- Improves product quality

Features

- ☑ **OpenEdge Integration** — Manage objects in any OpenEdge development environment.
- ☑ **Schema Management** — Manage schema changes through the development life cycle.
- ☑ **Task Management** — Organize related changes for promotion and auditing.
- ☑ **Impact Analysis** — View relationships between application resources with a click.
- ☑ **Variant Management** — Manage application resource and schema customizations.
- ☑ **Smart Compilation** — Automatically compile programs affected by a change.
- ☑ **Release Control** — Identify and promote application releases through the lifecycle.
- ☑ **Deployments** — Deliver full and incremental updates to specific end-user sites.
- ☑ **Security** — Control access and privileges. Generate project reports. Audit activity.
- ☑ **Partner Site Replication** — Allows direct synchronization with partner repositories.
- ☑ **Hooks and API** — Integrate existing systems or extend Roundtable functionality.

SYSTEM REQUIREMENTS

Roundtable TSMS requires both OpenEdge database and OpenEdge development licenses. Roundtable TSMS is supported on all OpenEdge development platforms.

COMPATIBILITY

Roundtable TSMS is an OpenEdge ABL application and uses an OpenEdge database as its repository database. As an OpenEdge application, Roundtable TSMS is OS-compatible to the extent that the underlying OpenEdge development environment is OS-compatible.

For more information about Roundtable TSMS, contact Tugboat Software or your local Progress sales representative.
